Plane Radar

See live aircraft flying near your home.
Needs **2.4 GHz Wi-Fi + internet** · Powered by **USB-C**

SETUP – 6 STEPS

1. **Plug in.** Use the USB cable and any phone charger. The screen lights up.
2. **On your phone, open Wi-Fi settings.** Join the network `PlaneRadar-Setup`. No password.
3. **A setup page opens.** If not, open your web browser and type `192.168.4.1`
4. **Pick your home Wi-Fi,** type the password, tap **Save**.
5. **Wait a few seconds.** The radar appears.
6. **Set your location** (see the box below).

STEP 6 IS IMPORTANT. The radar starts set to Amsterdam, so you must enter your own location.
With your phone on your **home Wi-Fi**, open `plane-radar.local` in your browser. Type your **Latitude** and **Longitude**, tap **Save**.
Finding your numbers: in Google Maps, touch and hold on your home. The two numbers shown are your coordinates.
Tip: West and south numbers have a minus sign (-).
Not loading? Use the radar's IP address from your router instead.

THE BUTTON (MARKED BOOT)

Quick press	Changes the range (how far the radar sees)
Hold 3 seconds	Resets Wi-Fi and location. Then start again at step 1

Do not hold the button while plugging in. The screen will stay blank. If this happens, unplug and plug in again without touching the button.

RANGE – PRESS TO CHANGE

5 km / 3 mi	**10** km / 6 mi (starts here)	**15** km / 9 mi	**25** km / 16 mi

TRY THESE LOCATIONS

Busy airports. Type any pair into the settings page (`plane-radar.local`) to see lots of traffic. Minus (-) = west or south. Approximate.

Airport	Latitude	Longitude
New York (JFK)	40.6413	-73.7781
Los Angeles (LAX)	33.9416	-118.4085
Chicago (ORD)	41.9742	-87.9073
Atlanta (ATL)	33.6407	-84.4277
San Francisco (SFO)	37.6213	-122.3790

Airport	Latitude	Longitude
London (LHR)	51.4700	-0.4543
Paris (CDG)	49.0097	2.5479
Amsterdam (AMS)	52.3105	4.7683
Dubai (DXB)	25.2532	55.3657
Singapore (SIN)	1.3644	103.9915

READING THE SCREEN

Aircraft

A triangle points the way it is flying. A line shows its speed. Name, type and height are beside it.

Dot on the edge

A plane too far away. It shows the direction only. Press the button to zoom out.

Rings

Distance circles. The label on the right-hand line gives the distance to the third ring.

Runways

Lines with the airport code, for major airports nearby. Can be turned off on the settings page.

Centre dot = your home

North is always at the top (N, E, S, W marked on the edge).

Planes on the ground

Not shown. Only planes in the air appear.

HELP

Problem	What to do
Screen is blank	Try another cable and charger. Unplug and replug without touching the button.
Can't see `PlaneRadar-Setup`	Hold the button 3 seconds. Wait 10 seconds. Search Wi-Fi again.
Setup page won't open	Type `192.168.4.1` in your browser. Turn off mobile data on your phone.
Stuck on "Connecting"	Wrong password, or the network is 5 GHz only. Needs 2.4 GHz. Hold the button 3 seconds and try again.
No planes	Check your location is set. Check internet works. Press the button to widen the range. Quiet times can be empty.
Planes in wrong place	Location is still Amsterdam, or a minus sign is missing. Enter it again.
Changed router or moved	Hold the button 3 seconds. Start again at step 1.

CARE AND SAFETY

- Indoor use. Keep dry, away from heat and strong sun. Handle the glass gently.
- 5 V USB power only. Unplug before cleaning with a dry cloth.
- For fun only. **Not for navigation** or safety use. Data can be late or incomplete.
